

Dear Commissioners, I wish to express my strongest support for RM-10352 without any changes or reservations. I have been a licensed radio amateur since 1963 and I mainly operate in the CW (Morse Code) mode. I have personally experienced many times, the problem addressed by RM-10352. All amateurs have appreciated the Commission's wisdom in providing mode-segmentation on every other high frequency band (even the newer WARC bands), except the 160-meter band. The 160-meter band is not mode-segmented and it would appear, for no good reason. Granted, there are so-called "gentlemen's agreements" and voluntary band-plans suggested for the 160-meter band, but these are not heeded by many amateurs, perhaps purposely, and other amateurs simply are not aware of the suggested mode segregation. Adopting RM-10352 would end the regulatory disparity among amateur high frequency bands. It is reasonable, well thought-out and sensible. It does not go beyond what is needed to correct a situation which is now requiring the valuable attention of Mr. Riley Hollingsworth and others of the Enforcement Division of the FCC.

Respectfully Submitted,

Michael D. Lonneke
